

## Module 37

Sourangshu  
Bhattacharya

Objective &  
Outline

Exceptions in  
C++

Exception Scope  
(`try`)

Exception Arguments  
(`catch`)

Exception Matching

Exception Raise  
(`throw`)

Advantages

`std::exception`

Summary

# Module 37: Programming C++

## Exceptions (Error handling in C++): Part 2

Sourangshu Bhattacharya

Department of Computer Science and Engineering  
Indian Institute of Technology, Kharagpur

*sourangshu@cse.iitkgp.ac.in*

Slides taken from NPTEL course on Programming in C++

by **Prof. Partha Pratim Das**

# Module Objectives

## Module 37

Sourangshu  
Bhattacharya

### Objective & Outline

#### Exceptions in C++

Exception Scope  
(`try`)

Exception Arguments  
(`catch`)

Exception Matching

Exception Raise  
(`throw`)

Advantages

`std::exception`

### Summary

- Understand the Error handling in C++

# Module Outline

## Module 37

Sourangshu  
Bhattacharya

### Objective & Outline

#### Exceptions in C++

Exception Scope  
(try)

Exception Arguments  
(catch)

Exception Matching

Exception Raise  
(throw)

Advantages

std::exception

### Summary

- Exception Fundamentals
  - Types of Exceptions
  - Exception Stages
- Exceptions in C
  - C Language Features
    - Return value & parameters
    - Local goto
  - C Standard Library Support
    - Global variables
    - Abnormal termination
    - Conditional termination
    - Non-local goto
    - Signal
  - Shortcomings
- Exceptions in C++
  - Exception Scope (try)
  - Exception Arguments (catch)
  - Exception Matching
  - Exception Raise (throw)
  - Advantages

# Expectations

## Module 37

Sourangshu  
Bhattacharya

Objective &  
Outline

Exceptions in  
C++

Exception Scope  
(try)

Exception Arguments  
(catch)

Exception Matching

Exception Raise  
(throw)

Advantages

`std::exception`

Summary

- Separate Error-Handling code from Ordinary code
- Language Mechanism rather than of the Library
- Compiler for Tracking Automatic Variables
- Schemes for Destruction of Dynamic Memory
- Less Overhead for the Designer
- Exception Propagation from the deepest of levels
- Various Exceptions handled by a single Handler

# try-throw-catch

## Module 37

Sourangshu  
Bhattacharya

Objective &  
Outline

Exceptions in  
C++

Exception Scope  
(try)  
Exception Arguments  
(catch)  
Exception Matching  
Exception Raise  
(throw)  
Advantages  
std::exception

Summary

```
void f() {  
    A a;  
    try {  
        B b;  
        g();  
        h();  
    }  
    catch (UsrExcp& ex) {  
        cout <<  
            ex.what();  
    }  
    return;  
}
```

```
class UsrExcp:  
    public exceptions {}  
  
void g()  
{  
    A a;  
    UsrExcp ex("From g()");  
  
    throw ex;  
  
    return;  
}
```

- g() called

# try-throw-catch

## Module 37

Sourangshu  
Bhattacharya

### Objective & Outline

### Exceptions in C++

Exception Scope  
(try)  
Exception Arguments  
(catch)  
Exception Matching  
Exception Raise  
(throw)  
Advantages  
std::exception

### Summary

```
void f() {  
    A a;  
    try {  
        B b;  
        g();  
        h();  
    }  
    catch (UsrExcp& ex) {  
        cout <<  
            ex.what();  
    }  
    return;  
}  
  
class UsrExcp:  
    public exceptions {}  
  
void g()  
{  
    A a;  
    UsrExcp ex("From g()");  
  
    throw ex;  
  
    return;  
}
```

- g() successfully returns

# try-throw-catch

## Module 37

Sourangshu  
Bhattacharya

### Objective & Outline

### Exceptions in C++

Exception Scope  
(try)  
Exception Arguments  
(catch)  
Exception Matching  
Exception Raise  
(throw)  
Advantages  
std::exception

### Summary

```
void f() {  
    A a;  
    try {  
        B b;  
        g();  
        h();  
    }  
    catch (UsrExcp& ex) {  
        cout <<  
            ex.what();  
    }  
    return;  
}  
  
class UsrExcp:  
    public exceptions {}  
  
void g()  
{  
    A a;  
    UsrExcp ex("From g()");  
    throw ex;  
    return;  
}
```

- g() called and exception raised
- Stack frame of g() unwinds
- Remaining execution of g() and call of h() skipped
- Exception caught by catch clause
- Normal flow continues

Edited on 17-Feb-2021

# Exception Flow

## Module 37

Sourangshu  
Bhattacharya

### Objective & Outline

### Exceptions in C++

Exception Scope  
(try)

Exception Arguments  
(catch)

Exception Matching

Exception Raise  
(throw)

Advantages

std::exception

### Summary

```
#include <iostream>
#include <exception>
using namespace std;
```

```
class MyException : public exception {};
class MyClass { ~MyClass() {} };
```

```
void h() { MyClass h_a;
    //throw 1;           // Line 1
    //throw 2.5;         // Line 2
    //throw MyException(); // Line 3
    //throw exception();  // Line 4
    //throw MyClass();    // Line 5
} // Stack unwind, h_a.~MyClass() called
// Passes on all exceptions
```

```
void g() { MyClass g_a;
    try {
        h();
        bool okay = true; // Not executed
    }
    // Catches exception from Line 1
    catch (int)
        { cout << "int\n"; }
    // Catches exception from Line 2
    catch (double)
        { cout << "double\n"; }
    // Catches exception from Line 3-5
    // & passes on
    catch (...) { throw; }
} // Stack unwind, g_a.~MyClass() called
```

```
void f() { MyClass f_a;
    try {
        g();
        bool okay = true; // Not executed
    }
    // Catches exception from Line 3
    catch (MyException)
        { cout << "MyException\n"; }
    // Catches exception from Line 4
    catch (exception)
        { cout << "exception\n"; }
    // Catches exception from Line 5
    // & passes on
    catch (...) { throw; }
} // Stack unwind, f_a.~MyClass() called
```

```
int main() {
    try {
        f();
        bool okay = true; // Not executed
    }
    // Catches exception from Line 5
    catch (...)
        { cout << "Unknown\n"; }

    cout << "End of main()\n";
    return 0;
}
```

# try Block: Exception Scope

Module 37

Sourangshu  
Bhattacharya

Objective &  
Outline

Exceptions in  
C++

Exception Scope  
(try)

Exception Arguments  
(catch)

Exception Matching

Exception Raise  
(throw)

Advantages

std::exception

Summary

- try block
  - Consolidate areas that might throw exceptions
- function try block
  - Area for detection is the entire function body
- Nested try block
  - Semantically equivalent to nested function calls

## Function try

```
void f()
{
    try {
        throw E();
    }
    catch (E& e) {
    }
}
```

## Nested try

```
try {
    try { throw E(); }
    catch (E& e) { }
}
catch (E& e1) {
}
```

# try-throw-catch

## Module 37

Sourangshu  
Bhattacharya

### Objective & Outline

### Exceptions in C++

Exception Scope  
(try)

Exception Arguments  
(catch)

Exception Matching

Exception Raise  
(throw)

Advantages

std::exception

### Summary

```
void f() {  
    A a;  
    try {  
        B b;  
        g();  
        h();  
    }  
    catch (UsrExcp& ex) {  
        cout <<  
            ex.what();  
    }  
    return;  
}
```

```
class UsrExcp:  
    public exceptions {}  
  
void g()  
{  
    A a;  
    UsrExcp ex("From g()");  
  
    throw ex;  
  
    return;  
}
```

- try Block

# catch Block: Exception Arguments

## Module 37

Sourangshu  
Bhattacharya

Objective &  
Outline

Exceptions in  
C++

Exception Scope  
(try)

Exception Arguments  
(catch)

Exception Matching

Exception Raise  
(throw)

Advantages

std::exception

Summary

- `catch` block
  - Name for the Exception Handler
  - Catching an Exception is like invoking a function
  - Immediately follows the try block
  - Unique Formal Parameter for each Handler
  - Can be simply a Type Name to distinguish its Handler from others

# try-throw-catch

## Module 37

Sourangshu  
Bhattacharya

### Objective & Outline

### Exceptions in C++

Exception Scope  
(try)

Exception Arguments  
(catch)

Exception Matching

Exception Raise  
(throw)

Advantages

std::exception

### Summary

```
void f() {  
    A a;  
    try {  
        B b;  
        g();  
        h();  
    }  
    catch (UsrExcp& ex) {  
        cout <<  
            ex.what();  
    }  
    return;  
}
```

```
class UsrExcp:  
    public exceptions {}  
  
void g()  
{  
    A a;  
    UsrExcp ex("From g()");  
  
    throw ex;  
  
    return;  
}
```

- catch Block

# try-catch: Exception Matching

## Module 37

Sourangshu  
Bhattacharya

### Objective & Outline

#### Exceptions in C++

Exception Scope  
(try)

Exception Arguments  
(catch)

Exception Matching

Exception Raise  
(throw)

Advantages

`std::exception`

### Summary

- Exact Match
  - The catch argument type matches the type of the thrown object
    - No implicit conversion is allowed
- Generalization / Specialization
  - The catch argument is a public base class of the thrown class object
- Pointer
  - Pointer types – convertible by standard conversion

# try-throw-catch

## Module 37

Sourangshu  
Bhattacharya

Objective &  
Outline

Exceptions in  
C++

Exception Scope  
(try)

Exception Arguments  
(catch)

Exception Matching

Exception Raise  
(throw)

Advantages

std::exception

Summary

```
void f() {  
    A a;  
    try {  
        B b;  
        g();  
        h();  
    }  
    catch (UsrExcp& ex) {  
        cout <<  
            ex.what();  
    }  
    return;  
}
```

```
class UsrExcp:  
    public exceptions {}  
  
void g()  
{  
    A a;  
    UsrExcp ex("From g()");  
    throw ex;  
    return;  
}
```

- Expression Matching

# try-catch: Exception Matching

Module 37

Sourangshu  
Bhattacharya

Objective &  
Outline

Exceptions in  
C++

Exception Scope  
(try)

Exception Arguments  
(catch)

Exception Matching

Exception Raise  
(throw)

Advantages

std::exception

Summary

- In the order of appearance with matching
- If Base Class catch block precedes Derived Class catch block
  - Compiler issues a warning and continues
  - Unreachable code (derived class handler) ignored
- `catch(...)` block must be the last catch block because it catches all exceptions
- If no matching Handler is found in the current scope, the search continues to find a matching handler in a dynamically surrounding try block
  - Stack Unwinds
- If eventually no handler is found, `terminate()` is called

# throw *Expression*: Exception Raise

Module 37

Sourangshu  
Bhattacharya

Objective &  
Outline

Exceptions in  
C++

Exception Scope  
(try)

Exception Arguments  
(catch)

Exception Matching

Exception Raise  
(throw)

Advantages

std::exception

Summary

- *Expression* is treated the same way as
  - A function argument in a call or the operand of a return statement
- Exception Context
  - `class Exception ;`
- The *Expression*
  - Generate an Exception object to throw
    - `throw Exception();`
  - Or, Copies an existing Exception object to throw
    - `Exception ex;`
    - `...`
    - `throw ex; // Exception(ex);`
- Exception object is created on the Free Store

# try-throw-catch

## Module 37

Sourangshu  
Bhattacharya

### Objective & Outline

### Exceptions in C++

Exception Scope  
(try)

Exception Arguments  
(catch)

Exception Matching

Exception Raise  
(throw)

Advantages

std::exception

### Summary

```
void f() {  
    A a;  
    try {  
        B b;  
        g();  
        h();  
    }  
    catch (UsrExcp& ex) {  
        cout <<  
            ex.what();  
    }  
    return;  
}
```

```
class UsrExcp:  
    public exceptions {}  
  
void g()  
{  
    A a;  
    UsrExcp ex("From g()");  
    throw ex;  
    return;  
}
```

- throw Expression

# throw *Expression*: Restrictions

- For a UDT Expression
  - Copy Constructor and Destructor should be supported
- The type of Expression cannot be
  - An incomplete type (like void, array of unknown size or of elements of incomplete type, Declared but not Defined struct / union / enum / class Objects or Pointers to such Objects)
  - A pointer to an Incomplete type, except void\*, const void\*, volatile void\*, const volatile void\*

Module 37

Sourangshu  
Bhattacharya

Objective &  
Outline

Exceptions in  
C++

Exception Scope  
(try)

Exception Arguments  
(catch)

Exception Matching

Exception Raise  
(throw)

Advantages

std::exception

Summary

# (re)-throw: Throwing Again?

- Re-throw

- catch may pass on the exception after handling
- Re-throw is not same as throwing again!

## Throws again

```
try { ... }  
catch (Exception& ex) {  
    // Handle and  
    ...  
    // Raise again  
    throw ex;  
    // ex copied  
    // ex destructed  
}
```

## Re-throw

```
try { ... }  
catch (Exception& ex) {  
    // Handle and  
    ...  
    // Pass-on  
    throw;  
    // No copy  
    // No Destruction  
}
```

Module 37

Sourangshu  
Bhattacharya

Objective &  
Outline

Exceptions in  
C++

Exception Scope  
(try)

Exception Arguments  
(catch)

Exception Matching

Exception Raise  
(throw)

Advantages

std::exception

Summary

# Advantages

## Module 37

Sourangshu  
Bhattacharya

Objective &  
Outline

Exceptions in  
C++

Exception Scope  
(try)

Exception Arguments  
(catch)

Exception Matching

Exception Raise  
(throw)

Advantages

`std::exception`

Summary

- **Destructor-savvy:**
  - Stack unwinds; Orderly destruction of Local-objects
- **Unobtrusive:**
  - Exception Handling is implicit and automatic
  - No clutter of error checks
- **Precise:**
  - Exception Object Type designed using semantics
- **Native and Standard:**
  - EH is part of the C++ language
  - EH is available in all standard C++ compilers

# Advantages

## Module 37

Sourangshu  
Bhattacharya

Objective &  
Outline

Exceptions in  
C++

Exception Scope  
(try)

Exception Arguments  
(catch)

Exception Matching

Exception Raise  
(throw)

Advantages

std::exception

Summary

- **Scalable:**

- Each function can have multiple try blocks
- Each try block can have a single Handler or a group of Handlers
- Each Handler can catch a single type, a group of types, or all types

- **Fault-tolerant:**

- Functions can specify the exception types to throw; Handlers can specify the exception types to catch
- Violation behavior of these specifications is predictable and user-configurable

# Exceptions in Standard Library: `std::exception`

## Module 37

Sourangshu  
Bhattacharya

## Objective & Outline

## Exceptions in C++

Exception Scope  
(try)

Exception Arguments  
(catch)

Exception Matching

Exception Raise  
(throw)

Advantages

`std::exception`

## Summary

All objects thrown by components of the standard library are derived from this class. Therefore, all standard exceptions can be caught by catching this type by reference.

```
class exception {  
public:  
    exception () throw();  
    exception (const exception&) throw();  
    exception& operator= (const exception&) throw();  
    virtual ~exception() throw();  
    virtual const char* what() const throw();  
}
```

- **logic\_error**: Faulty logic like violating logical preconditions or class invariants (may be preventable)
  - **invalid\_argument**: An argument value has not been accepted
  - **domain\_error**: Situations where the inputs are outside of the domain for an operation
  - **length\_error**: Exceeding implementation defined length limits for some object
  - **out\_of\_range**: Attempt to access elements out of defined range
- **runtime\_error**: Due to events beyond the scope of the program and can not be easily predicted
  - **range\_error**: Result cannot be represented by the destination type
  - **overflow\_error**: Arithmetic overflow errors (Result is too large for the destination type)
  - **underflow\_error**: Arithmetic underflow errors (Result is a subnormal floating-point value)
- **bad\_typeid**: Exception thrown on typeid of null pointer
- **bad\_cast**: Exception thrown on failure to dynamic cast
- **bad\_alloc**: Exception thrown on failure allocating memory
- **bad\_exception**: Exception thrown by unexpected handler

# Module Summary

## Module 37

Sourangshu  
Bhattacharya

Objective &  
Outline

Exceptions in  
C++

Exception Scope  
(`try`)

Exception Arguments  
(`catch`)

Exception Matching

Exception Raise  
(`throw`)

Advantages

`std::exception`

Summary

- Discussed exception (error) handling in C++
- Illustrated `try-throw-catch` feature in C++ for handling errors
- Demonstrated with examples
